Curso: Programação Orientada a Objetos com Java

Projeto Sistema de Jogo de Xadrez

Objetivo geral:

• Aplicar os conhecimentos aprendidos no curso para a construção de um projeto

System design

https://github.com/Gabriel7812/Java/tree/main/Projects/chess-system/chess-system-design

Creating project and git repository

Checklist:

- Github: create a new project
 - o NOTE: choose .gitignore type as Java
- Open a terminal in project folder, and perform the following commands:

```
git init
git remote add origin https://github.com/acenelio/chess-system-java.git
git pull origin master
git add .
git commit -m "Project created"
git push -u origin master
```

First class: Position

- Class Position [public]
- OOP Topics:
 - Encapsulation
 - Constructors
 - ToString (Object / overriding)

Starting to implement Board and Piece

Checklist:

- Classes Piece, Board [public]
- OOP Topics:

 - AssociationsEncapsulation / Access Modifiers
- Data Structures Topics:
 - Matrix

Chess layer and printing the board

8	-	-	-	-	-	-	-	-
7	-	-	-	-	-	-	-	-
6	-	-	-	-	-	-	-	-
5	-	-	-	-	-	-	-	-
4	-	-	-	-	-	-	-	-
3	-	-	-	-	-	-	-	-
2	-	-	-	-	-	-	-	-
1	-	-	-	-	-	-	-	-
	а	b	c	d	е	f	g	h

Checklist:

- Methods: Board.Piece(row, column) and Board.Piece(position)
- Enum Chess.Color
- Class Chess.ChessPiece [public]
- Class Chess.ChessMatch [public]
- Class ChessConsole.UI
- OOP Topics:
 - o Enumerations
 - o Encapsulation / Access Modifiers
 - o Inheritance
 - Downcasting
 - o Static members
 - Layers pattern
- Data Structures Topics:
 - Matrix

Placing pieces on the board

- Method: Board.PlacePiece(piece, position)
- Classes: Rook, King [public]
- Method: ChessMatch.InitialSetup
- OOP Topics:
 - o Inheritance
 - $\circ \quad \text{Overriding} \quad$
 - Polymorphism (ToString)

BoardException and defensive programming

Checklist:

- Class BoardException [public]
- Methods: Board.PositionExists, Board.ThereIsAPiece
- Implement defensive programming in Board methods
- OOP Topics:
 - Exceptions
 - o Constructors (a string must be informed to the exception)

ChessException and ChessPosition

Checklist:

- Class ChessException [public]
- Class ChessPosition [public]
- Refactor ChessMatch.InitialSetup
- OOP Topics:
 - Exceptions
 - o Encapsulation
 - o Constructors (a string must be informed to the exception)
 - Overriding
 - Static members
 - Layers pattern

Little improvement in board printing

Color in terminal:

- Windows: Git Bash
- Mac: Google "osx terminal color"

Checklist:

- Place more pieces on the board
- Distinguish piece colors in UI.PrintPiece method

Moving pieces

- Method Board.RemovePiece
- Method UI.ReadChessPosition
- Method ChessMatch.PerformChessMove
 - Method ChessMatch.MakeMove
 - Method ChessMatch.ValidadeSourcePosition
- Write basic logic on Program.cs
- OOP Topics:
 - Exceptions
 - o Encapsulation

Handling exceptions and clearing screen

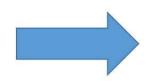

Clear screen using Java:

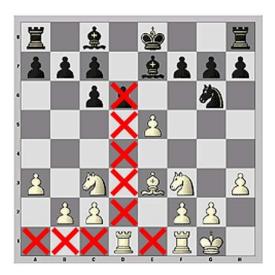

```
// https://stackoverflow.com/questions/2979383/java-clear-the-console
public static void clearScreen() {
    System.out.print("\033[H\033[2J");
    System.out.flush();
}
```

- ChessException
- InputMismatchException

Possible moves of a piece

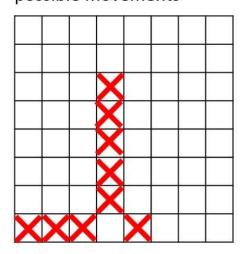

Input: a piece

Output: a boolean matrix of possible movements

- Methods in Piece:
 - o PossibleMoves [abstract]
 - PossibleMove
 - IsThereAnyPossibleMove
- Basic PossibleMove implementation for Rook and King
- Update ChessMatch.ValidadeSourcePosition
- OOP Topics:
 - o Abstract method / class
 - Exceptions

Implementing possible moves of Rook

Checklist:

- Method ChessPiece.IsThereOpponentPiece(position) [protected]
- Implement Rook.PossibleMoves
- Method ChessMatch.ValidateTargetPosition
- OOP Topics:
 - o Polymorphism
 - o Encapsulation / access modifiers [protected]
 - Exceptions

Printing possible moves

Checklist:

- Method ChessMatch.PossibleMoves
- Method UI.PrintBoard [overload]
- Refactor main program logic
- OOP Topics:
 - Overloading

Implementing possible moves of King

Checklist:

- Method King.CanMove(position) [private]
- Implement King.PossibleMoves
- OOP Topics:
 - o Encapsulation
 - o Polymorphism

Switching player each turn

- Class ChessMatch:
 - o Properties Turn, CurrentPlayer [private set]
 - Method NextTurn [private]
 - Update PerformChessMove
 - o Update ValidadeSourcePosition
- Method UI.PrintMatch
- OOP Topics:
 - Encapsulation
 - o Exceptions

Handling captured pieces

Checklist:

- Method UI.PrintCapturedPieces
- Update UI.PrintMatch
- Update Program logic
- Lists in ChessMatch: _piecesOnTheBoard, _capturedPieces
 - Update constructor
 - o Update PlaceNewPiece
 - Update MakeMove
- OOP Topics:
 - Encapsulation
 - Constructors
- Data Structures Topics:
 - o List

Check logic

Rules:

- Check means your king is under threat by at least one opponent piece
- You can't put yourself in check

Checklist:

- Property ChessPiece.ChessPosition [get]
- Class ChessMatch:
 - o Method UndoMove
 - Property Check [private set]
 - Method Opponent [private]
 - Method King(color) [private]
 - Method TestCheck
 - o Update PerformChessMove
- Update UI.PrintMatch

Checkmate logic

- Class ChessMatch:
 - o Property Checkmate [private set]
 - Method TestCheckmate [private]
 - Update PerformChessMove
- Update UI.PrintMatch
- Update Program logic

Piece move count

Checklist:

- Class ChessPiece:
 - o Property MoveCount [private set]
 - Method IncreaseMoveCount [internal]
 - Method DecreaseMoveCount [internal]
- Class ChessMatch:
 - o Update MakeMove
 - o Update UndoMove
- OOP Topics:
 - o Encapsulation

Pawn

Checklist:

- Class Pawn
- Update ChessMatch.InitialSetup
- OOP Topics:
 - Encapsulation
 - o Inheritance
 - o Polymorphism

Bishop

Checklist:

- Class Bishop
- Update ChessMatch.InitialSetup
- OOP Topics:
 - Encapsulation
 - o Inheritance
 - o Polymorphism

Knight

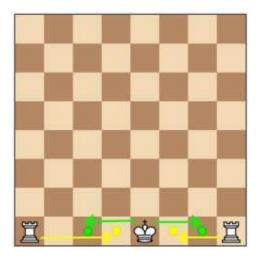

- Class Knight
- Update ChessMatch.InitialSetup
- OOP Topics:
 - Encapsulation
 - o Inheritance
 - o Polymorphism

Queen

Checklist:

- Class Queen
- Update ChessMatch.InitialSetup
- OOP Topics:
 - Encapsulation
 - Inheritance
 - o Polymorphism

Special move - Castling

- Update King
- Update ChessMatch.MakeMove
- Update ChessMatch.UndoMove

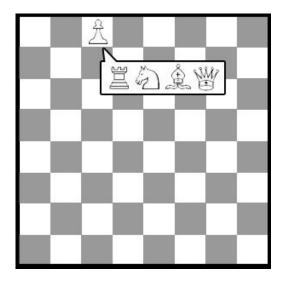

Special move - En Passant

Checklist:

- Register a pawn which can be captured by en passant on next turn
 - o Property ChessMatch.EnPassantVulnerable
 - Update ChessMatch.PerformChessMove
- Update Pawn.PossibleMoves
- Update ChessMatch.MakeMove
- Update ChessMatch.UndoMove
- Update ChessMatch.InitialSetup

Special move - Promotion

- Property ChessMatch.Promoted
- Update ChessMatch.PerformChessMove
- Method ChessMatch.ReplacePromotedPiece
- Update Program logic
